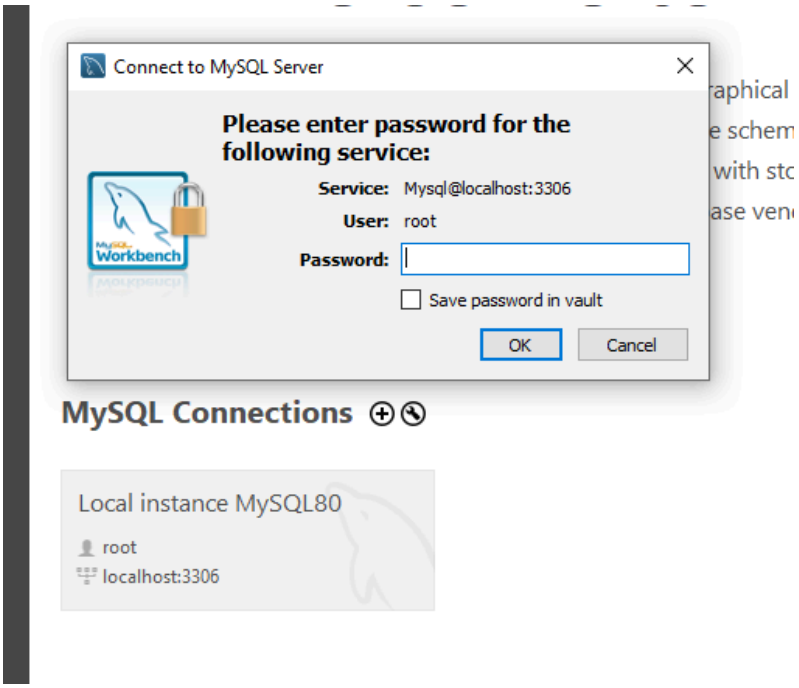
CompSci301 - Algorithms and Databases

Fall 2025, Session 2 - Database Installation

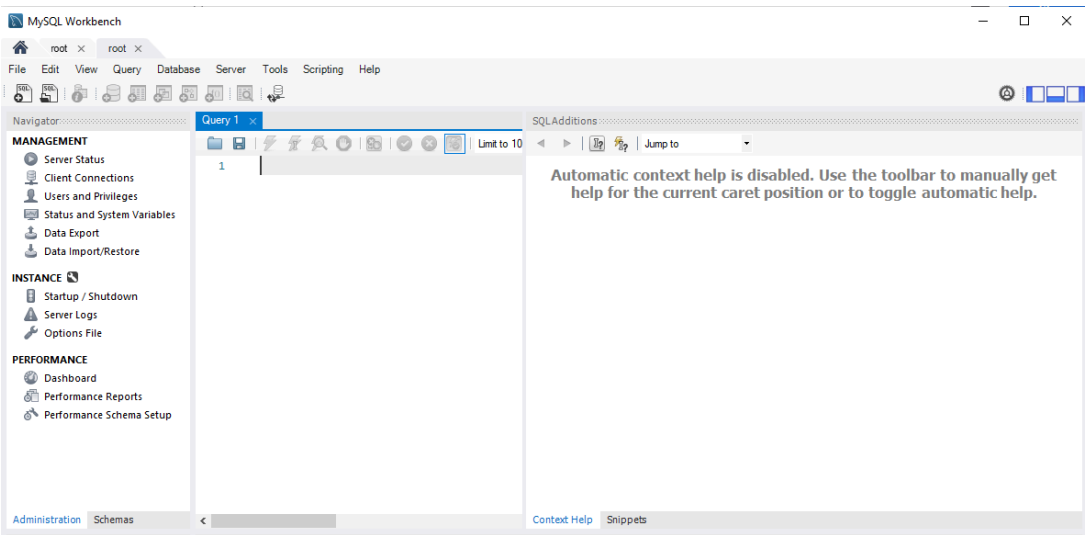
Suggested software for this course is **MySQL Server & MySQL Workbench**.

Download link for all Operating Systems: https://dev.mysql.com/downloads/workbench/ and https://downloads.mysql.com/archives/community/

1. Open MySQL Workbench, you will find one existing MySQL connection. Click and enter the password when you set up for the MySQL Server.

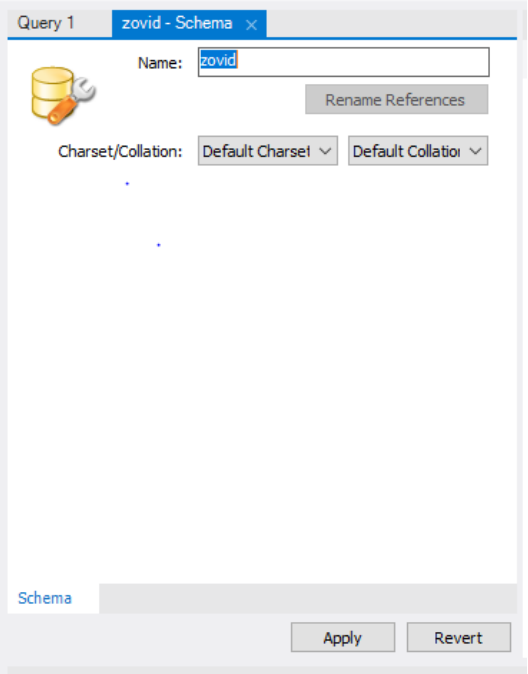


2. You will see:

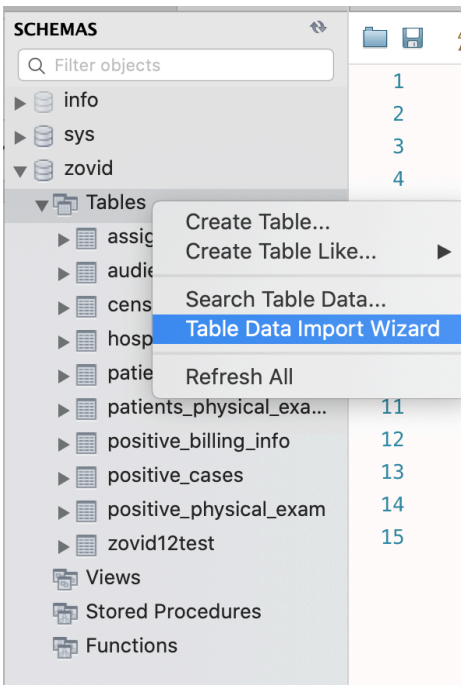


3. Create a new schema

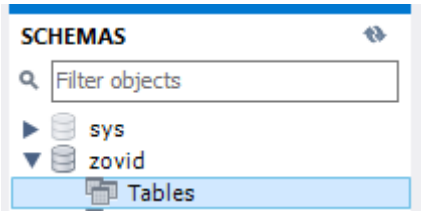
4. We call it “zovid”, and click “Apply”



5. After creating the “zovid” Schema, right click the “Tables”. Then you can import the .csv files by clicking the “Table Data Import Wizard”.



6. Don't forget to refresh the Schema after you import the tables, otherwise you could not see the tables you just imported.



More details: https://dev.mysql.com/doc/workbench/en/wb-admin-export-import.html
